heroal VS Z textile assembly for top-mounted box system VEKAVARIANT

Textile sun protection assembly for ready installation

The heroal VS Z textile assembly consists of a customised textile, a textile shaft cut to size, an already installed motor from the heroal range of your choice, and a pre-installed end strip (type III), as well as all required accessories, such as roller capsule and motor bearing. The heroal VS Z textile assembly can be installed in both box systems, the top-mounted PVC box VEKAVARIANT 2.0 for retrofit and renovation, and the top-mounted box VEKAVARIANT EPS for new buildings. After the box is completed, the heroal VS Z textile assembly can be installed in the box in just a few steps and operated (plug and play). Thanks to special 100 x 100 mm bearing plates in the box, designed for the sun protection system heroal VS Z, the shaft bearing is moved towards the front, into the direction of the outlet slot of the textile. This ensures that the textile screen enters the guide rails in almost vertical position. The heroal VS Z textile assemblies are available with different textiles, in various colours and translucencies.

Configuration and Ordering

- » Configure and order online via the heroal configurator
 - » Enter relevant specifications, such as box type, element dimensions, colour and drive mode
 - » Receive quotations directly from the heroal configurator
 - » Supply of the readily customised textile assembly by heroal
 - » Get all panel box components from VEKA, as usual
-
- » Three different ordering options for the guide rails:
 - 1.) Order powder-coated guide rails with drill holes, cut to the required size, from heroal. Delivery of rails together with the textile assembly
 - 2.) Order raw guide rails (6.5 m long) from VEKA, to be coated and machined by you
 - 3.) Order PVC cover caps in 6.5 m length from VEKA

System dimensions and system features

- » Customised textile assembly
- » Suitable for top-mounted panel box systems VEKAVARIANT, thanks to special 100 x 100 mm bearing plates
- » Guidance of the curtain via a zipper fixed to the textile, running in robust guide rails, with end strip
- » Maximum element size of heroal textile assembly in VEKAVARIANT box: width 4,000 mm, height 2,800 mm
- » Guide rails in the dimensions 37.5 x 48 mm and 58 x 48 mm
- » Suitable for motors from different manufacturers
- » Optional battery-buffered drive solutions for the 2nd escape route
- » Control of the curtain via remote control, manually via a wall switch, or via an app
- » Alternatively, the heroal roller shutter finished curtain can be integrated into the top-mounted panel box system

Design options

- » Up to 250 different colours and textiles with various levels of translucency, ranging from almost transparent to room darkening (up to 100 %), depending on the chosen textile
- » High-quality colour design with heroal hwr powder coating, heroal SD surface designs and Les Couleurs® Le Corbusier® for aluminium parts
