“spaces for life”: heroal at Batimat 2026

heroal presents aluminium system solutions for modern building shells

Verl, July 2026. Under the guiding theme “spaces for life”, heroal will present itself as a partner for modern building shells at Batimat in Paris from 28 September to 1 October 2026. At stand H4-F092, the aluminium systems company will bring individually configurable system solutions for residential and commercial construction to life and provide insight into its comprehensive service portfolio for customers.

Under the motto “spaces for life”, heroal will showcase high-quality aluminium system solutions for residential and commercial construction at Batimat 2026 in Paris. From 28 September to 1 October, the aluminium systems company will showcase solutions for windows, entrance and commercial doors, roller shutters, sun protection and curtain walls at stand H4-F092, as well as options for installation and design and services for its customers. With “spaces for life”, heroal underlines its aspiration to create liveable spaces with durable, functional and versatile system solutions – in private residential construction as well as in demanding commercial construction projects.

The focus is on systems that combine architectural design freedom, high quality and efficient fabrication. With this focus, heroal is addressing fabricators, architects and planners looking for high-performance solutions and a reliable partner for residential and commercial construction projects.

“Batimat is an important platform for us to engage in personal dialogue with customers, architects and planners from France and beyond. Under the guiding theme ‘spaces for life’, we are showing how heroal combines high-quality system solutions, design variety and partnership-based support. As a family-run company, we stand for stability, quality and closeness to our customers, and we support them with suitable services throughout the entire process, from ordering through to after sales,” says Philippe Buckel, Sales Director France, Belgium, Luxembourg and French-speaking Switzerland.

Solutions for residential construction: doors, windows, roller shutters and sun protection

For residential construction, heroal will present a broad spectrum of system solutions at Batimat that combine comfort, design, energy efficiency and fabrication reliability. In the area of door systems, heroal will present, among other things, an extension for connecting entrance doors to masonry that is designed to meet specific requirements of the French market.

For windows, heroal will also showcase system solutions that support fabricators during implementation while meeting the wide-ranging requirements of modern buildings. Among other things, heroal will present the comprehensive heroal plus window accessory system. In a workshop area at the exhibition stand, visitors will also be able to experience the installation of the heroal WF EM window fitting system live and gain practical insight into its fabrication.

In addition, heroal will present new products from its roller shutter portfolio, including the particularly narrow-winding heroal RS 37 SW roller shutter slat, a new angled end slat and the new driving-rain-proof heroal DRP guide rail. The system extensions will be presented at the exhibition stand in combination with a heroal passive house window, illustrating how functionality, efficiency and system integration can be combined in residential construction. heroal will also introduce a new product in the area of sliding systems, combining high-quality design with maximum transparency for premium residential construction projects. It will be on display in combination with a heroal sun protection system.

System solutions for commercial construction

For commercial construction, heroal will showcase solutions that combine design freedom, functionality and certified security. In the area of curtain wall systems, the focus will be on the heroal C 50 mullion-transom curtain wall with the partially integrated heroal VS Z CS curtain wall shading system. The combination shows how curtain wall solutions and sun protection can be implemented as an integrated system – for a high-quality building shell with functional added value.

In addition, with the heroal D 72 RC 3 door system, heroal will demonstrate a burglar-resistant solution with panic function. The single-leaf version is ideally geared towards the requirements of safety-relevant areas in commercial construction.

Design variety and individual surface finishes

Another focus of heroal's trade fair presentation is the design variety of its system solutions. Using selected surface samples – e.g. in the exclusively available Les Couleurs® Le Corbusier® colours – heroal brings the wide range of design options offered by its aluminium systems to life. The presentation shows how technical performance and architectural individuality can be combined. For architects and planners in particular, the variety of surface finishes offers numerous possibilities for designing building shells individually and on a project-specific basis.

Services from ordering through to after sales

In addition to product solutions, heroal will give visitors to Batimat a glimpse of its service portfolio. This will allow the company to show how it supports customers and partners beyond the product itself – as a collaborative, practice-oriented partner along key process steps, from ordering through to after sales. The services are designed to make processes more efficient, support planning and fabrication and ensure projects are implemented reliably. This also includes targeted support for architects and planners with information and documentation for tendering projects with heroal system solutions.

With its combination of high-quality aluminium system solutions, individual design variety and customer-focused services, heroal will use Batimat 2026 as an opportunity to underline its role as a stable and reliable partner for modern building shells in residential and commercial construction. Visitors to Batimat 2026 will find heroal at stand H4-F092.
